EXPERIENCE

Software Engineer <i>KPMG ITS</i>	September 2024 – Present <i>Sofia, Bulgaria</i>
- Extend AI-powered agentic platform using LangChain and LangGraph that enables real-time client interaction with large-scale fiscal data (implemented Azure integration, multiprocessing for concurrent user sessions, and auto-scaling worker instances). - Build and extend internal Vue.js platform components serving multiple concurrent client engagements, improving feature delivery through reusable, modular architecture. - Mentor junior developers on codebase onboarding, PR review practices, and frontend architecture patterns. - Automate generation of data-driven reports (Excel, PowerPoint, PDF), eliminating manual workflows and ensuring cross-business-unit consistency.	
Research Engineer <i>CWI & University of Amsterdam</i>	February 2024 – June 2024 (5m) <i>Amsterdam, The Netherlands</i>
Designed user study (n=16) with 7-test validation pipeline; built data collection system and delivered actionable product recommendations based on quantitative analysis.	
Software Engineer <i>Merkle (Dentsu)</i>	April 2022 – September 2023 (1y 6m) <i>Sofia, Bulgaria</i>
- Built environment management system adopted company-wide, enabling on-demand sandbox provisioning with automated dev/prod sync — reduced setup time by approximately 80%. - Developed internal employee rewards platform (Next.js, Apollo GraphQL, Knex.js), streamlining peer recognition and improving engagement.	
Software Engineer Intern <i>GILO Technologies</i>	July 2021 – February 2022 (8m) <i>Rijswijk, The Netherlands</i>
- Built core integration layer for Google Docs and Microsoft Word add-ons using TypeScript and Node.js. - Delivered production features for document automation used by end-customers for contract management.	

PROJECTS

3D Printing ERP System <i>Full-stack, React, TypeScript, FastAPI, PostgreSQL, Docker</i>	station3d.com
Built 3D printing ERP solving manufacturing inventory challenges. Tackled complex filament tracking and print job workflows. Features AI-powered insights for predictive inventory and usage analytics. Architected clean microservices with role-based authorization, activity logging, and dashboard analytics. Delivered production-ready solution with containerized deployment and CI/CD pipelines, demonstrating full-stack ownership and deep manufacturing domain expertise.	

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Frontend: React, Next.js, Vue 2/3, TanStack Query, Redux, Vuex, Pinia, Tailwind CSS
Backend: Node.js, Express, FastAPI, Apollo GraphQL, REST APIs
AI/LLM: LangChain, LangGraph, AI Agents, Prompt Engineering
Databases: PostgreSQL, MongoDB, TSQL, SQLAlchemy, Prisma ORM, Knex.js
DevOps & Tools: Docker, Docker Compose, Nginx, Git, CI/CD, Webpack
Validation & Testing: Zod, Pydantic, React Hook Form, pytest
Concepts: OOP, Functional Programming, RESTful Design, GraphQL, Microservices

EDUCATION

University of Amsterdam <i>Master of Science in Information Systems, Distinction (Cum Laude)</i>	Amsterdam, The Netherlands August 2023 – June 2024
- Specialized in intelligent systems, human-computer interaction, and data-driven product design. - Thesis research conducted at CWI (Dutch national research institute) — designed user study with 16 participants and built data analysis pipeline.	
Fontys University of Applied Sciences <i>Bachelor of Science in ICT</i>	Eindhoven, The Netherlands August 2019 – August 2023
- Erasmus exchange at Halmstad University (Sweden) — Computer Networks minor, Cisco CCNA fundamentals. - Built full-stack web applications across multiple team-based industry projects.
